

At QBD we are committed to actively exploring and implementing the latest technologies available in order to support our ultimate goal of reducing the impact of our products on the environment. These technologies may include high-efficiency: compressors, motors, lighting and other energy management systems.

Our product portfolio includes a complete lineup of green friendly systems, which allow our customers to reduce their carbon footprint as well as positively impact the bottom line!

In order to assist our customers in identifying the most energy efficient models we have developed the QBD energy smart™ program. Products bearing the QBD energy smart™ symbol have been tested and proven to deliver energy saving performance.

With the challenges of today and to protect our planet tomorrow we all need to make decisions that are both business smart and energy smart™.
